

# Flutter Developer Interview Questions (Hard Skills)

- The best way to check the Flutter developer's knowledge and experience is to look through the written code. It allows seeing the tech stack. However, in this case, you have to be a tech guru.
- You can prepare a development task and ask the candidate to do it before the interview.
  
- What is your experience in mobile development?
- Why do you want to study the Flutter framework?
- What's your experience in Dart programming language?
- Do you have any proof of your experience, e.g. projects published in App Store or Google Play?
- Do you follow any development guidelines? Which one?
- What tech stack do you prefer to use and why?
- What other platforms, stacks, framework, SDKs do you work with?
